Question-1 Write a PHP script to establish a connection with a MySQL database hosted on localhost named **student_management_system** using the username **root** and no password. Once the connection is established, fetch all records from a table named **students** which contains the columns: **std_name**, **std_roll**, and **std_img**. Display the data sorted by **std_id** in an HTML table format with the following requirements: **10**

- The first column of the HTML table must be a Serial Number (incremented manually), followed by the database columns.
- The **std_img** column contains the file path; therefore, you must render the actual image using an `<img>` tag.

Answer:

Question-2 `<form action="login-helper.php" method="POST">`
`<label>Username:</label> <input type="text" name="username" required>`
`<label>Password:</label> <input type="password" name="password" required>`
`<button type="submit">Login</button>`
`</form>` **05**

The provided HTML form utilizes the POST method for credential transmission. Analyze the security implications of substituting the POST method with the GET method.

Answer:

Question-3 Distinguish between the <head> and <header> tags in HTML. Additionally, describe the method for displaying a favicon image on an HTML page, specifying the required tag and its placement. **05**

Answer:

Question-4 Write down the functionalities of the following functions in PHP. **05**

- isset
- header
- bind_param
- empty
- count

Answer:

Question-1 Explain why the foreach loop is used to iterate through associative arrays in PHP, and describe its usage with a suitable example. **05**

Answer:

Question-2 Write a PHP script where you will take three values a, b, and c from the URL using \$_GET['a'], \$_GET['b'], and \$_GET['c'], and then use these values to find the roots (solutions) of the quadratic equation $ax^2 + bx + c = 0$. **08**

Answer:

Invigilators Signature _____

Question-3 Write a PHP program to connect to a MySQL database named “movie_db” using username “root” and no password (assume the database and PHP script are on the same server); the database contains a table named “feedback” with fields id, name, message, and rating (1–5). Your task is to write SQL queries using PHP script to calculate and display the average rating, and also retrieve and display the name and message of the user who gave the highest rating, presenting the results in a simple format. **12**

Answer:

```

<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:orientation="vertical"
    android:weightSum="10">
    <TextView
        android:layout_width="match_parent"
        android:layout_height="0dp"
        android:layout_weight="1"
        android:text="DASHBOARD"
        android:gravity="center" />
    <LinearLayout
        android:layout_width="match_parent"
        android:layout_height="0dp"
        android:layout_weight="7"
        android:orientation="horizontal"
        android:weightSum="4">
        <Button
            android:layout_width="0dp"
            android:layout_height="match_parent"
            android:layout_weight="1"
            android:text="B1" />
        <LinearLayout
            android:layout_width="0dp"
            android:layout_height="match_parent"
            android:layout_weight="3"
            android:orientation="vertical"
            android:weightSum="3">
            <EditText
                android:layout_width="match_parent"
                android:layout_height="0dp"
                android:layout_weight="1"
                android:hint="Enter Input Here" />
            <LinearLayout
                android:layout_width="match_parent"
                android:layout_height="0dp"
                android:layout_weight="1"
                android:orientation="horizontal"
                android:weightSum="2">
                <Button
                    android:layout_width="0dp"
                    android:layout_height="match_parent"
                    android:layout_weight="1"
                    android:text="B2" />
                <Button
                    android:layout_width="0dp"
                    android:layout_height="match_parent"
                    android:layout_weight="1"
                    android:text="B3" />
            </LinearLayout>
        <Button
            android:layout_width="match_parent"
            android:layout_height="0dp"
            android:layout_weight="1"
            android:text="B4" />
        </LinearLayout>
    </LinearLayout>
    <LinearLayout
        android:layout_width="match_parent"
        android:layout_height="0dp"
        android:layout_weight="2"
        android:orientation="horizontal"
        android:weightSum="2">
        <TextView
            android:layout_width="0dp"
            android:layout_height="match_parent"
            android:layout_weight="1.5"
            android:text="TEXT FOR TEST"
            android:gravity="center_vertical" />
        <Button
            android:layout_width="0dp"
            android:layout_height="match_parent"
            android:layout_weight="0.5"
            android:text="B5" />
        </LinearLayout>
    </LinearLayout>

Question-1 Consider you are designing a mobile application for Smart Home Automation System. In this system, 50 different sensors (Temperature, Light, Motion, Smoke) are sending data to the cloud. Homeowners need to see these changes on their mobile app instantly (e.g., if a motion sensor detects a thief, the app must show "Alert" immediately). Analyze why Firebase Realtime Database is a more suitable solution for this IoT system compared to a traditional SQL Database (like MySQL). **04**

Answer:

Question-2 Explain the roles of an Intent object and the process of switching from one Activity to another in Android. **05**

Answer:

Question-3 Briefly explain the Android Activity Lifecycle and the types of logic a developer should implement in each stage. **06**

Answer:

Question-4 Illustrate an UI interface based on the attached XML code. The examiner understands that you cannot draw with the exact measurements like a computer. So, you are asked to draw the UI using approximate measurements that look close to the code. **10**

Answer:

Invigilators Signature _____
